# 5.13~5.16

#### 5.13A.

5.13B.

浮点数加法

5.13C.

整数加法

5.13D.

关键路径上只有加法

```
int limit = length - 5;
for(i=0;i<limit;i+=6)
{
    sum = sum + udata[i]*vdata[i]
    + udata[i+1]*vdata[i+1]
    + udata[i+2]*vdata[i+2]
    + udata[i+3]*vdata[i+3]
    + udata[i+4]*vdata[i+4]
    + udata[i+5]*vdata[i+5];
}
for(;i<length;i++)
{
    sum = sum + udata[i]*vdata[i];
}
*dst = sum;</pre>
```

虽然展开了6次,但关键路径上仍然有length个浮点加法 达到了浮点加法的吞吐量极限

#### 5.15.

```
int limit = length - 5;
for(i=0;i<limit;i+=6)
{
    sum1 += udata[i]*vdata[i];
    sum2 += udata[i+1]*vdata[i+1];
    sum3 += udata[i+2]*vdata[i+2];
    sum4 += udata[i+3]*vdata[i+3];
    sum5 += udata[i+4]*vdata[i+4];
    sum6 += udata[i+5]*vdata[i+5];
}
for(;i<length;i++)
{
    sum1 += udata[i]*vdata[i];
}
*dst = sum1 + sum2 + sum3 + sum4 + sum5 + sum6;</pre>
```

寄存器溢出,或者分支预测错误

```
int limit = length - 5;
for(i=0;i<limit;i+=6)
{
    sum = sum + (udata[i]*vdata[i]
    + udata[i+1]*vdata[i+1]
    + udata[i+2]*vdata[i+2]
    + udata[i+3]*vdata[i+3]
    + udata[i+4]*vdata[i+4]
    + udata[i+5]*vdata[i+5]);
}
for(;i<length;i++)
{
    sum = sum + udata[i]*vdata[i];
}
*dst = sum;</pre>
```

# 6.30~6.33

6.30A.

$$C = S \times E \times B = 128$$

6.30B.

СТ	CI	CI	CI	СО	СО
